INDUSTRIES SERVED

-  Computers & Electronics
-  Consumer Products
-  Cosmetic & Beauty
-  Food & Beverage
-  Medical & Pharmaceutical
-  Toys, Games & Sporting Goods

Finishing Services / Die Cutting

COATING

You can add a layer of protection or a gloss or matte finish to your package by coating the paper wrap. Choices of coatings include varnish, aqueous, UV or blister. Spot Coating is also available.

FOIL STAMPING

With foil stamping, you can achieve a brilliance that cannot be duplicated with ink. A wide spectrum of matte, gloss, metallic, or holographic foils are available in various colors.

EMBOSSING / DEBOSSING

Through embossing, we can add texture by raising your graphics off your package. By debossing, we can lower your graphics off your package. Either embossing or debossing your package will add value and class.

DIE CUTTING

We can custom design steel rule dies to your specifications. In addition, we have expertise in die cutting paperboard with intricate shapes that are cut to precise tolerances by our craftsmen.
